

LAB1 Report

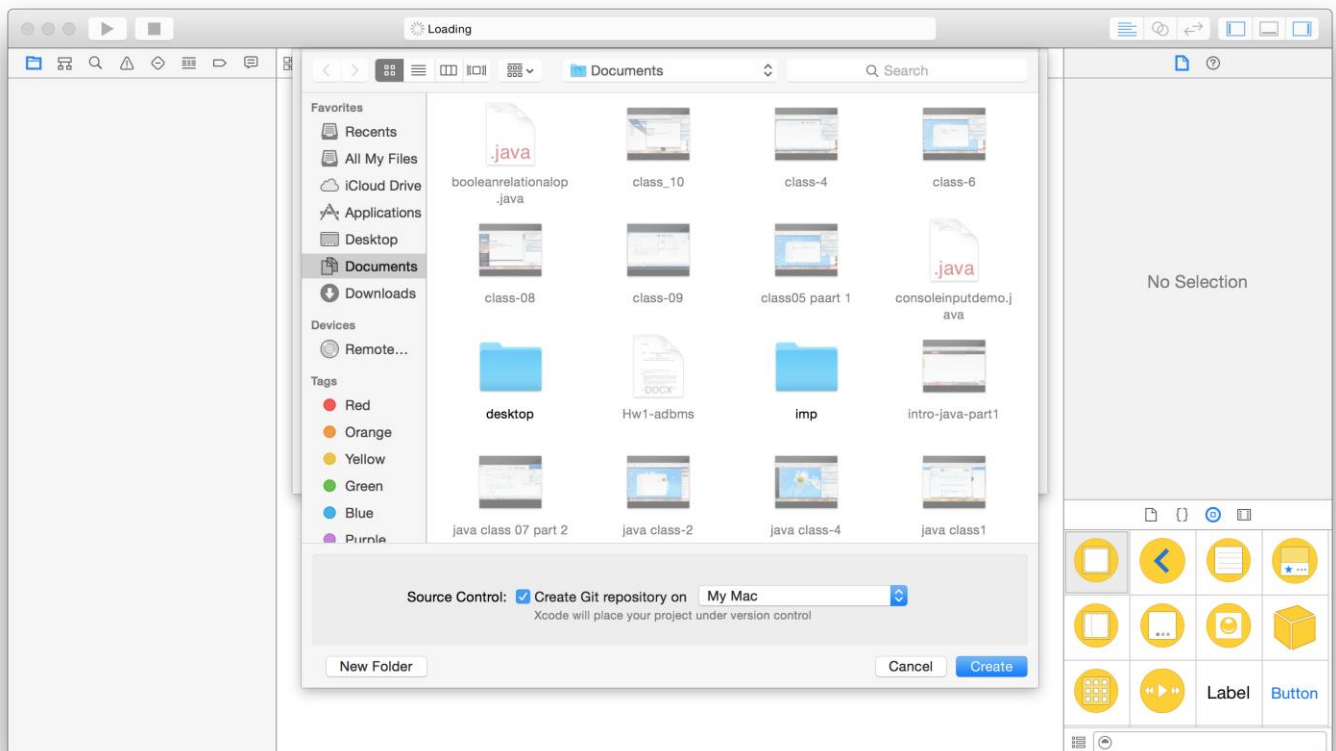

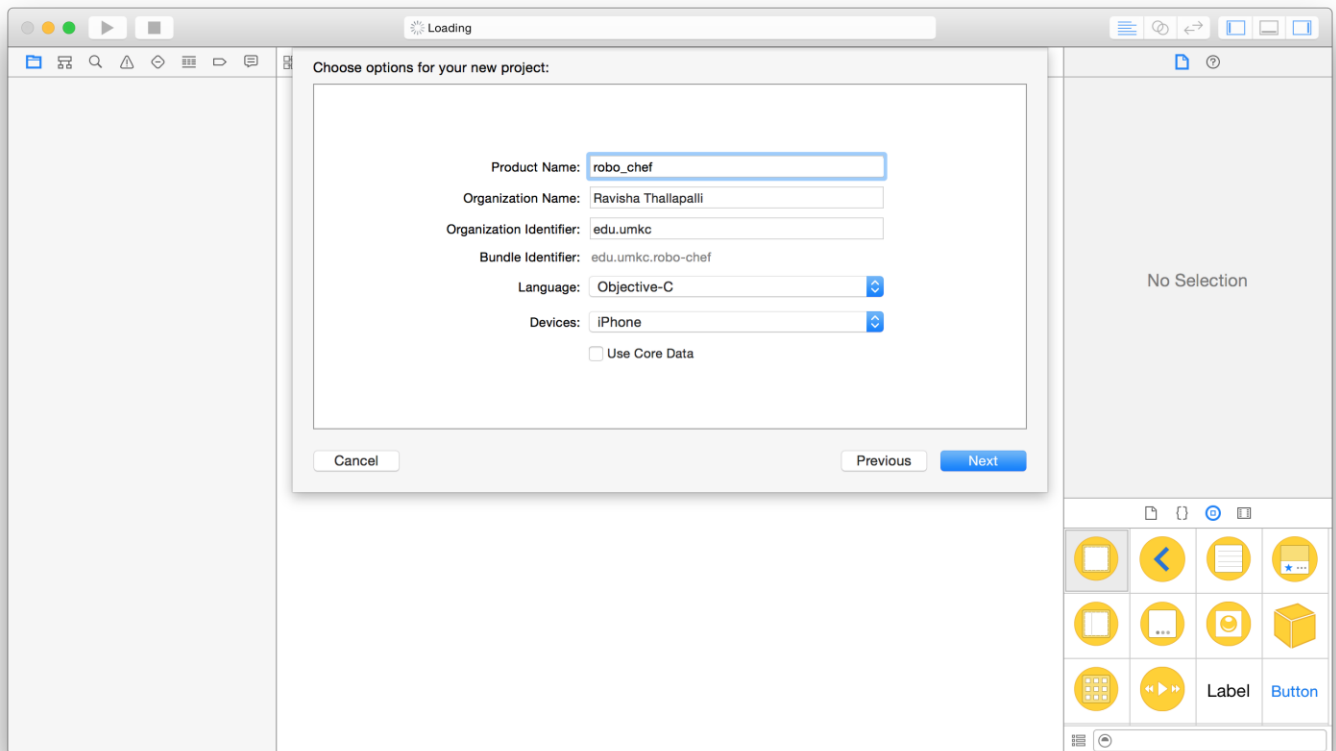

By,

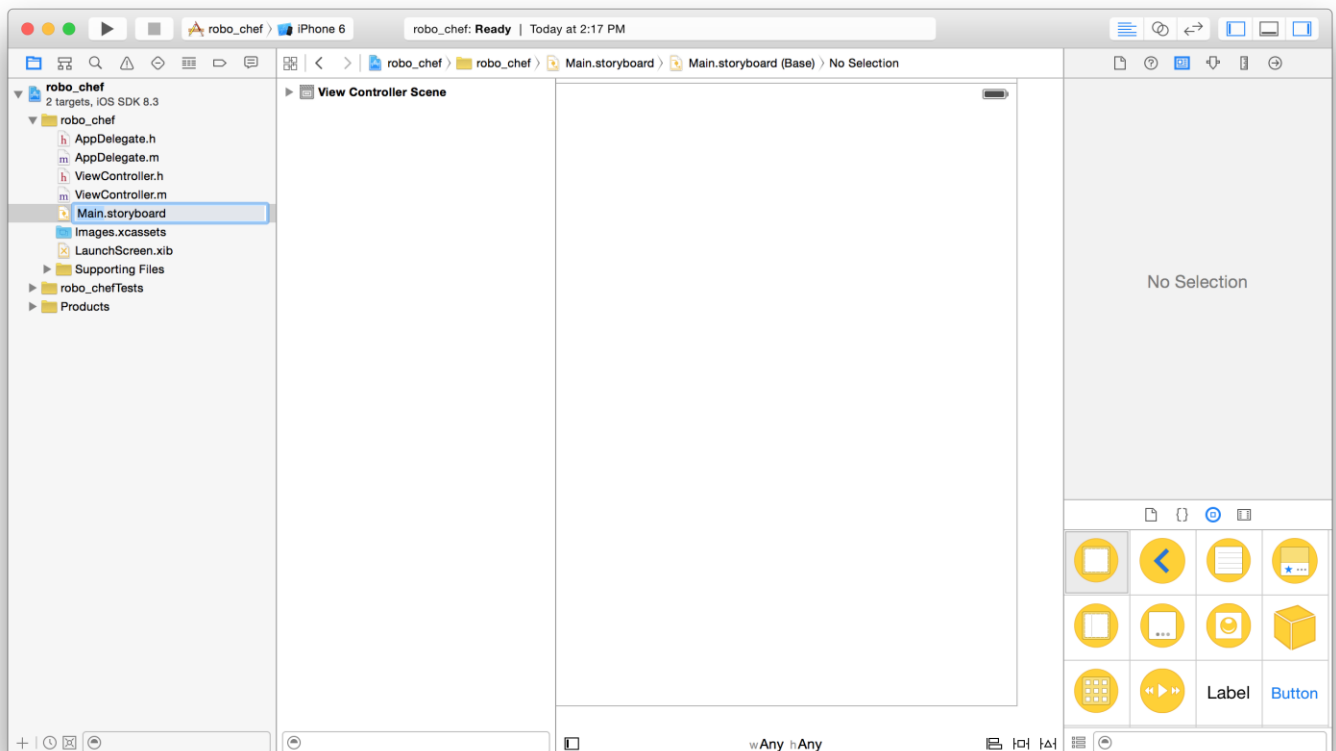

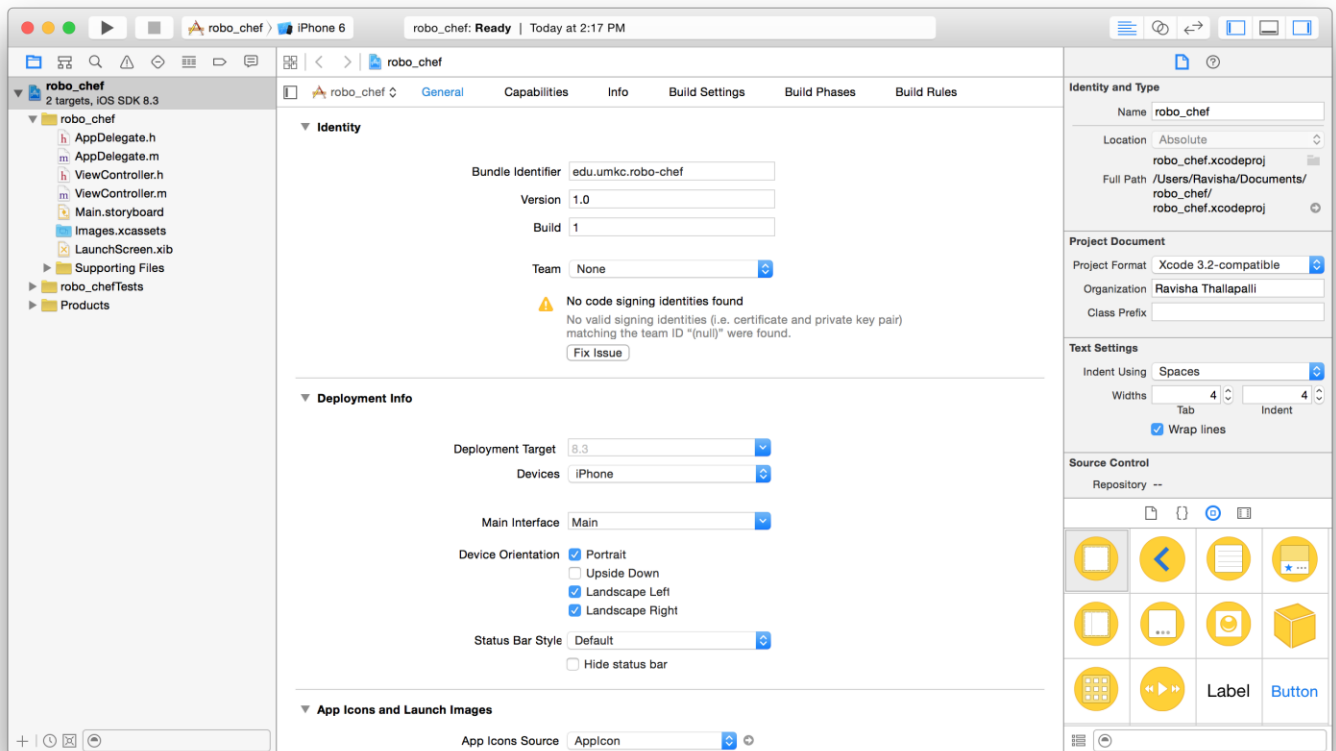

Ravisha, Thallapalli (16171645)

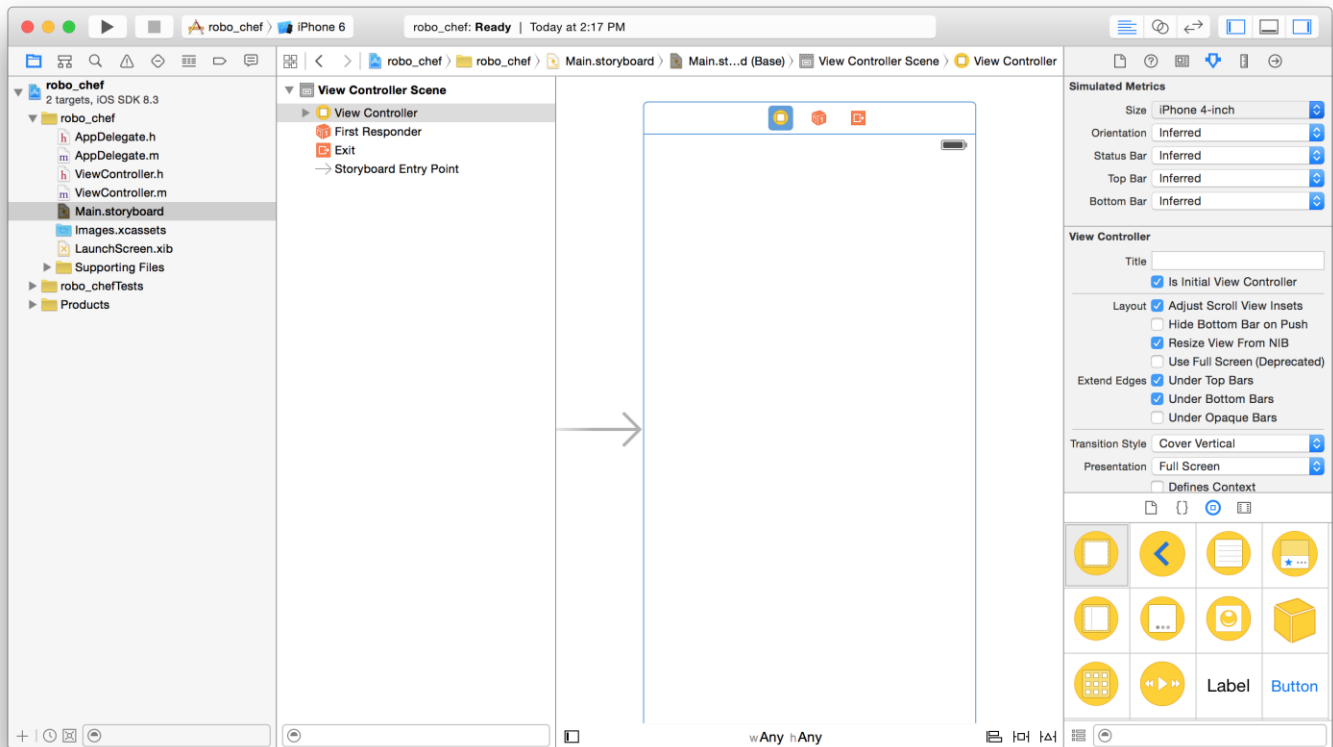

Sirish Chandra, Madanapally (16190428)

The following screen shots show how to create a project in X code and create a view and how to add content to the view

The following are the views developed for the lab session. The first view contains a simple label and button to navigate to the next view.

The second view consists of a greeting label and two buttons to navigate to the first and third view.

The third view consists of a simple back button which navigates to the second page.

Hello Everyone

The back button functionality is implemented by the method `onClickBack`. The method uses the `dismissViewControllerAnimated:YES completion:^{}` method to go back to the previous views. The source code is shown in the below screenshot.

The following screen shot shows all the views in the story board.
